

Marble Waiver

Marble surfaces are more susceptible to staining by many common liquids such as mustard, oil, vinegar, citrus juice, mouth wash, hairspray, etc.

Any acidic substance that may come into contact with your marble countertops/vanity tops will cause a chemical reaction that will etch and remove the polish of the marble.

- Marble is a natural product that is more porous than granite and therefore, more susceptible to staining and chipping.
- Marble is a soft material which is easy to scratch.
- Marble comes with surface scratches, fissures (a form of crack that has no stone content and is usually filled with clear resin) and divots known as pocks.
- Marble has extrusions (small visual cracks that are not faults in the marble slab).
- Marble has marks of efflorescence (appears as a white powdery residue on the surface of the stone).
- Marble can come with shade, veining, and pattern variances from one end of the slab to the other.
- Marble loses shine with wear.
- Marble requires frequent applications of sealant.
- Seams in marble countertops/vanity tops are visible and felt when you run your hand along it.
- Seam locations are at the sole discretion of the fabricator unless specified in writing before production (change in seam location may necessitate the quote to be revised).
- Marble is not recommended for use in kitchens.

Burleigh Stone Artisans will not be held responsible for misuse or damage caused by customers negligence.

I have read and understand the above notations that may occur in my marble countertops/vanity tops.
